sapwood shingles, no imperfections up to its clear line.
- **Utility Grade D (Green Label):**
multipurpose and shims.

R&R Shingles:

Re-squared and Rebutted, squared shingles, perfect finish; grading of remanufactured shingles to grading rules of regular shingles to each corresponding category.

DCS white cedar shingles are sold in the United States, especially in the New England states, Mid-Western states and on the West Coast, as well as in Ontario, Quebec and in the Maritime Provinces.

Factory Coated, Weathering Stain™/Bleached & Semi transparent Stain

DCS Cedar Shingles and Olympic Paint and Stains; together offer you these beautiful new products.

Our **FR** shingles are re-squared and rebuted. Their edges are squared to eliminate on-site shaving for timesaving installation. Our shingles are then rebuted to ensure a perfect finish for exceptional beauty and quality. To further enhance the appearance of your shingles, we now offer (3) coating options.

Our weathering stained shingles have been specifically formulated to give our shingles a uniform, naturally weathered, silver-grey finish more rapidly and uniformly than nature.

With our Machinecoat™ factory coated shingles, we offer five traditional colours, which are Monterey Gray, Linen White, Safari Beige, Cape Cod Gray and Patriot Gray. An array of many popular colours is also available on special orders.

DCS also offers to apply a coat of semi-transparent stain. This will give your shingle a rich finish allowing much of the wood's grain and texture to show through.

What is factory finishing?

Factory finishing is an engineering coating process taking place in a controlled environment. This closed environment provides the optimum conditions for coating cedar shingles. These shingles must be brought to a proper climatic balance and moisture content before they are coated. All shingles are checked for moisture content before the coating is applied, thus ensuring their quality and performance for years to come. And since the elements are not a factor in the factory, we can eliminate weather delays on the job site.

Weathering Stain™/bleached shingles.

Olympic's Weathering Stain™ has been specifically formulated to provide our shingles with a uniform, naturally weathered, silver-grey finish more rapidly and evenly than nature. It contains a special weathering agent to accelerate the natural weathered process, providing an attractive, low maintenance finish. Upon application, this product imparts a soft grey tone to the white cedar shingles. Also, the weathering stain linseed oil formula penetrates deep into the wood to strengthen wood fibres.

- Accelerates the natural weathered process to provide a silver driftwood-grey look in six to nine months.
- Linseed oil formula penetrates deep to strengthen and condition wood fibres.
- Helps prevent unsightly mildew growth on the stain film.
- Limited lifetime warranty against cracking, peeling and blistering.

Semi-transparent Stain

This is an excellent option for anyone desiring to enhance the beautiful look of cedar with your choice a various colors. This will allow the coating to protect and maintain the shingle while highlighting the wood's grain and texture. When you decide to have (1) coat of Olympic **semi-transparent stain**, we back it up with a 12-year warranty.

Machinecoat™ ...a quality product with a beautiful finish and a limitless color pallet!

The Machinecoat™ Exterior finish is a water based 100% acrylic latex coating formulated specifically for machine application to real natural wood fibre. Machinecoat™ offers the application and performance characteristics of a premium latex paint combined with the beauty and protection of an oil-based stain.

The manufacturer offers a 5-year guarantee against any peeling, cracking and flaking on (1) coat of Olympic paint and a 15-year warranty when we apply (2) coats.

Machinecoat™'s unique formula resists marks and scratches so it stands up to handling in transit and during installation. With Machinecoat™, there's no need for costly call-backs to cover shrink lines, lap marks, scratches or overspray.

Because Machinecoat™ is machine applied before installation, there's minimal danger of premature coating failure due to damage of exposed surfaces prior to coating. This revolutionary exterior finish offers a range of benefits and your building has immediate curb appeal.

The many benefits of prefinished shingles:

- A quality product produced and coated in our own factory;
- Adds immediate protection and distinction to your project;
- Far superior to usual "blow and go" spray paint jobs;
- Coatings backed by Olympic, a leader in architectural finishes;
- Reduces regular maintenance;
- The most cost-effective way to coat all four sides of your shingles.

Accurate mil thickness of coating is factory applied to the eastern white cedar shingles. Great care is then taken to see that the coating is properly cured and dried. All coated shingles are then packaged, fully protected and, once installed, are ready to perform for a very long time.

Victorian Series

144 shingles per/box covers 25 sq/ft when installed at a 5" exposure. Available raw and pre-finished (Made from Kiln Dried Grade A Extra Shingles). Standard 5" width and 16" in length.
